

Textbooks for Class of 2024-2025

The most current additions of the following textbooks are required for the Diagnostic Medical Sonography Programs. Textbooks are ordered and distributed by the program to assure that all students have the most current textbook edition.

The school does NOT charge a mark-up on textbooks. However, if a student decides to purchase his or her own books, the Director, upon written request, will provide the necessary information to assure that all students have the correct and updated edition. **If a student elects to self-purchase, the Program Director must be notified by no later than the first day of October.**

General Program:

Penny, S. M. (2021). *Introduction to sonography and patient care*. Wolters Kluwer.

ISBN-10: 1975120108

ISBN-13: 978-1975120108
